

Playwright

@WebKit Con 2023

State of Modern E2E Testing

Agenda

- Playwright
- Trends
- Lessons learned
- Internals
- Challenges
- Resources
- Q&A

Playwright: **History**

- 2009 - 2013: WebKit Web Inspector
- 2013 - 2019: Chrome DevTools
- 2011: CDP - chrome remote protocol
- 2015: Node.js debugging tools
- 2017: Puppeteer - automation
- 2020: Playwright - cross-browser testing

Playwright: **Test**

```
import { test, expect } from '@playwright/test';

test('has title', async ({ page }) => {
  await page.goto('https://playwright.dev/');

  // Expect a title "to contain" a substring.
  await expect(page).toHaveTitle(/Playwright/);
});

test('get started link', async ({ page }) => {
  await page.goto('https://playwright.dev/');

  // Click the get started link.
  await page.getByRole('link', { name: 'Get started' }).click();

  // Expects page to have a heading with the name of Installation.
  await expect(page.getByRole('heading', { name: 'Installation' })).toBeVisible();
});
```

Playwright: Trace

The screenshot displays the Playwright Trace viewer interface. At the top, the browser address bar shows `trace.playwright.dev`. The main area is a timeline from 0 to 1.7s, with a detailed view of the `locator.click` action at approximately 0.66s. The left sidebar lists the test steps: `Before Hooks` (375ms), `page.goto` (951ms), `locator.click` (66ms), `expect.toBeVisible` (140ms), and `After Hooks` (0ms). The central pane shows a preview of the `https://playwright.dev/` page, which features the text "Playwright enables reliable end-to-end testing for modern web apps." and a "GET STARTED" button. The right pane displays the corresponding TypeScript test code:

```
1 import { test, expect } from '@playwright/test';
2
3 test('has title', async ({ page }) => {
4   await page.goto('https://playwright.dev/');
5
6   // Expect a title "to contain" a substring.
7   await expect(page).toHaveTitle(/Playwright/);
8 });
9
10 test('get started link', async ({ page }) => {
11   await page.goto('https://playwright.dev/');
12
13   // Click the get started link.
14   await page.getByRole('link', { name: 'Get started' }).click();
15
16   // Expects page to have a heading with the name of Installati
17   await expect(page.getByRole('heading', { name: 'Installati
18 }));
19
```

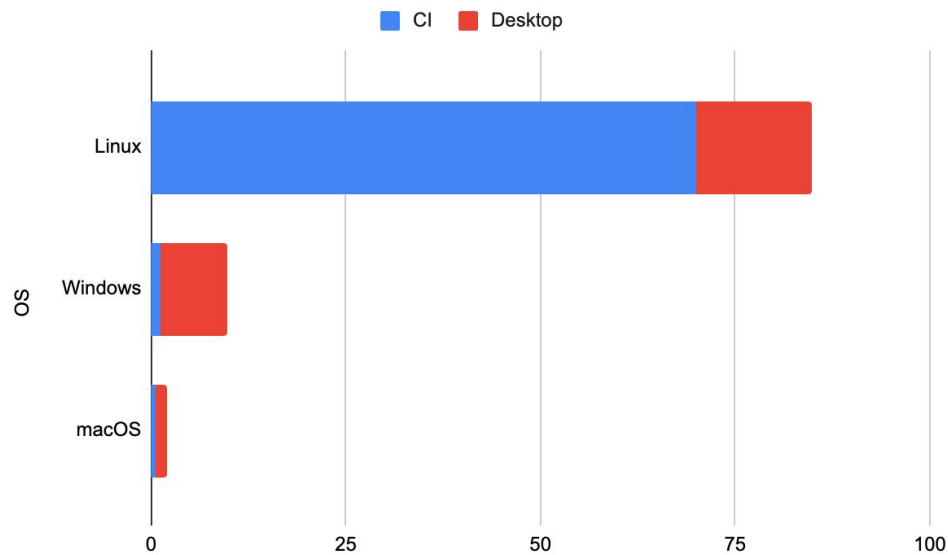

Playwright: **Features**

- **Accessible:** zero configuration, all platforms, all clouds, all containers, all browsers.
- **Capable:** network, emulation, javascript, security, workers, service workers, oopifs, etc.
- **Simple:** resilient role-based locators, auto-waiting and action retries.
- **Reliable:** in-memory browser contexts, removed flakiness.
- **Fast:** parallel headless execution.
- **Complete:** devX, test runner, trace viewer, reporting, recorder, ide

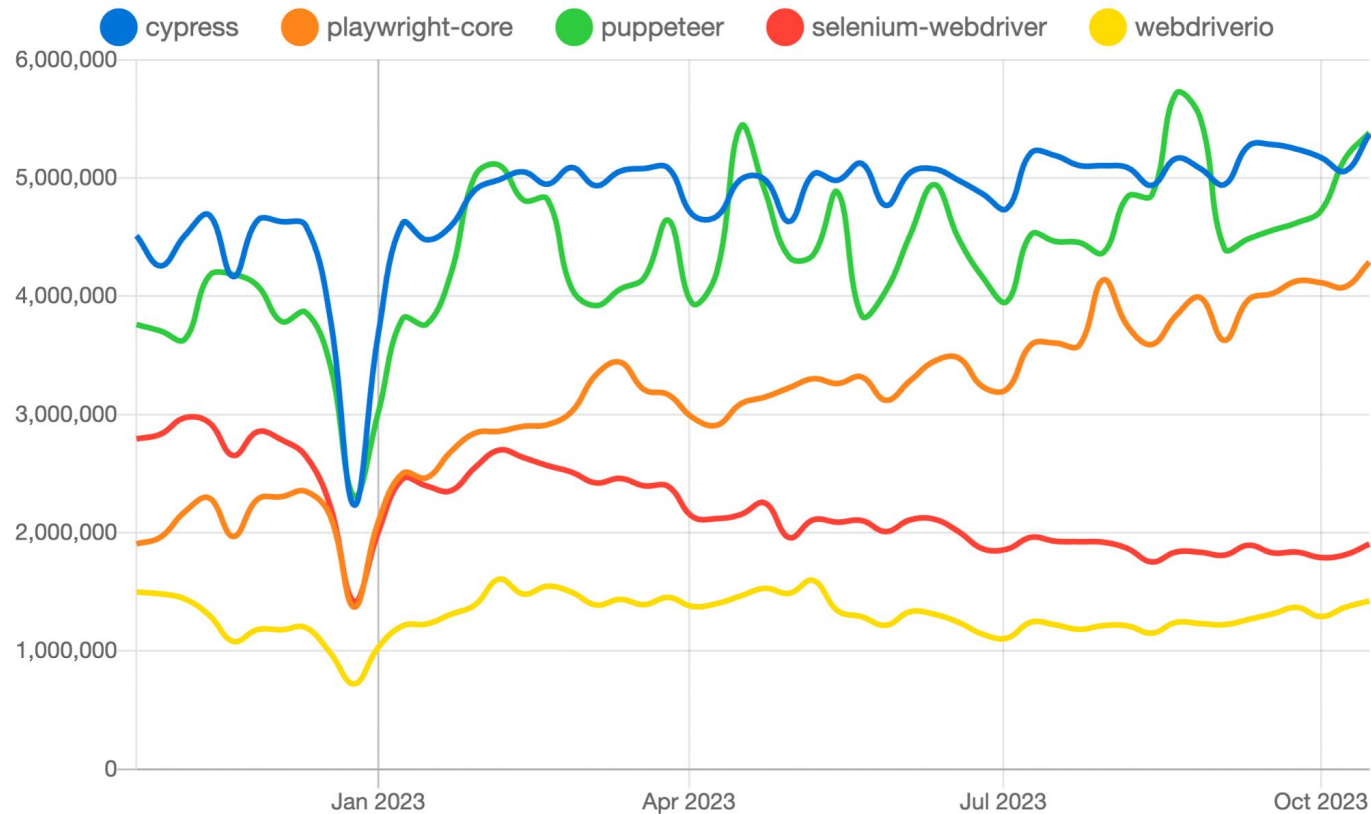

Trends

Trends: Platform & OS

Trends: NPM downloads

Trends: **Browsers**

Lessons, challenges

Lessons: **What makes it work**

1. **Integration:** from the **occlusion** detection in the **trusted click** all the way to the **trace viewer** experience.
2. **Product approach:** Playwright is **responsible** for the bugs and regressions, we can't afford **click** does not work in iframe in a certain driver implementation.
3. **Cadence:** Monthly release cycle allows fixing bugs as they are reported (upstreamed where possible).
4. **Quality:** Extensive test coverage.

Internals: **Architecture (WebKit)**

- macOS, Windows, Linux
 - headed and headless embedders
- Communication over **Web Inspector Protocol (WebCore)**
 - **navigation** - cross-process, same document
 - **clicks** - occlusion
 - **emulation** - fixed layout, dpr
 - **network** - interception
 - **javascript** - run in execution context, bootstrap
 - **frames** - inspection
 - **workers** - inspection
 - ...
- Target management: **contexts, targets, pipe.**

Challenges

- Emulation: touch code is missing in macOS & GTK
- Fixed layout assumes iOS
- Screenshots across platforms - consistent compositing
- Network stack inconsistencies (oh well)
- No great upstream avenue - Web Inspector Protocol is not accessible to the embedder
